

Georgi Ganev, Analytics Leader IBM Bulgaria

IBM Planning Analytics Overview

Planning Analytics Overview

- **As of December 2016 and moving forward, TM1 is now known as *Planning Analytics***
- **It remains IBM's offering in the Strategic Corporate Performance Management space as a tool that allows you to create *plans* (e.g. *budgets/forecasts*)**
- **History of TM1 (Table Manager 1)**
 - Created in the mid 80s, originally marketed by Sinper corporation
 - October of 1996 it was bought by Applix
 - In 2007, TM1 became a Cognos product through the acquisition of Applix
 - In 2008, TM1 became an IBM product through the acquisition of Cognos
 - In Q4 2015, the cloud version of TM1 was renamed Planning Analytics (the on-prem version remained TM1)
 - In Q4 2016, the on-prem version of TM1 was renamed to Planning Analytics *Local*

IBM Planning Analytics in a nutshell

Three Broad Capabilities of Planning Analytics

Planning Analytics helps organizations plan smarter by improving

Speed

Drive Efficiency

High performance in-memory engine, intuitive and familiar interfaces

Foresight

Deliver Foresight

Discover drivers and trends, model scenarios

Agility

Steer Continuously

Adapt quickly to changing business conditions

Overview of Planning Analytics: https://www.youtube.com/watch?v=SFcBe_fK_-s

Speed - IBM Planning Analytics

Key Message

SPEED

KEY CAPABILITIES

- Planning & Analytics Workspace
- Excel Integration
- TM1 Engine

FORESIGHT

- Data Discovery
- Advanced Analysis
- Internal & External Data

AGILITY

- Strategy Management
- Metrics and Drivers
- Management Reporting

Planning Analytics Workspace

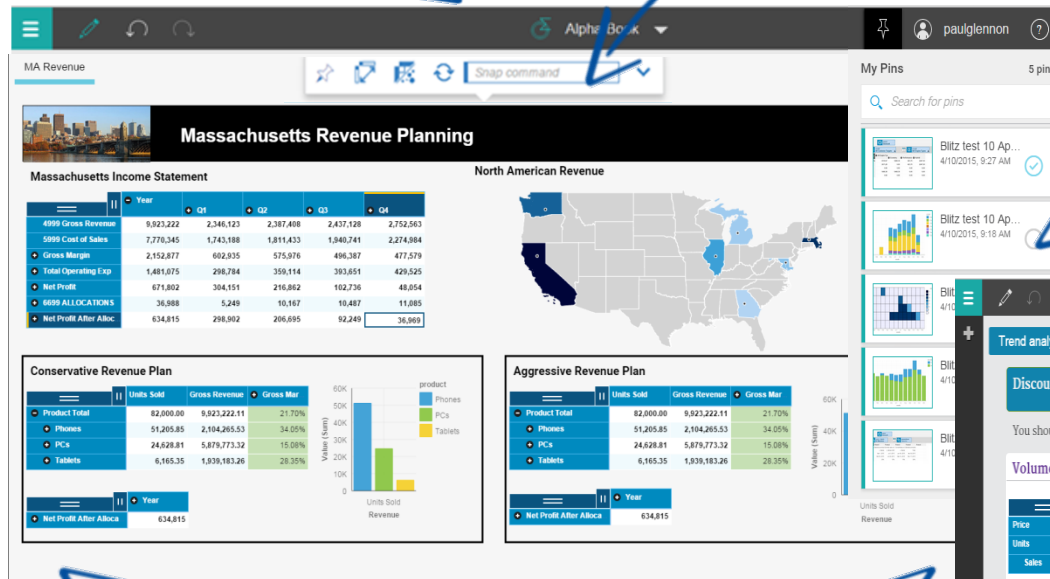

Best in Breed Planning | Easy, Intuitive, Graduated

Rich interactive workspace

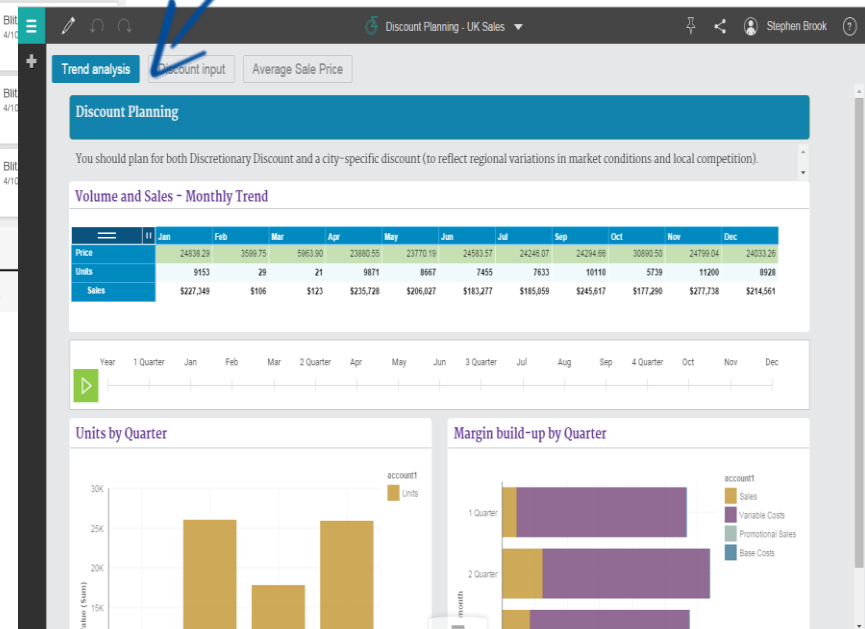

Natural language discovery & manipulation

Collaboration and Pin to share & reuse

Organize into multi-tabbed workbooks

Synchronize objects from any data source

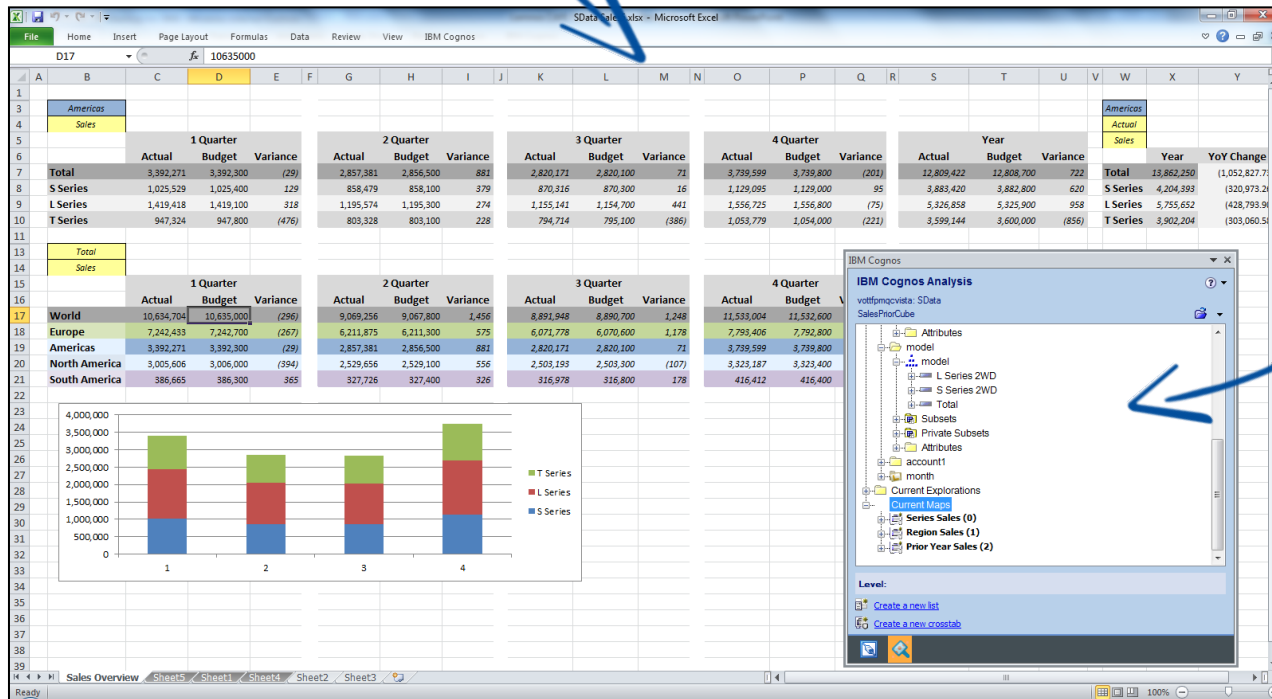

Robust Excel Integration

Embrace and Surround Excel

Excel connected to
Planning Analytics Cloud

Name changed from CAFÉ to
Planning Analytics for Excel or PAX

Move freely
between Planning
Analytics
workspace and
Excel

Hi-Speed, In-Memory Engine

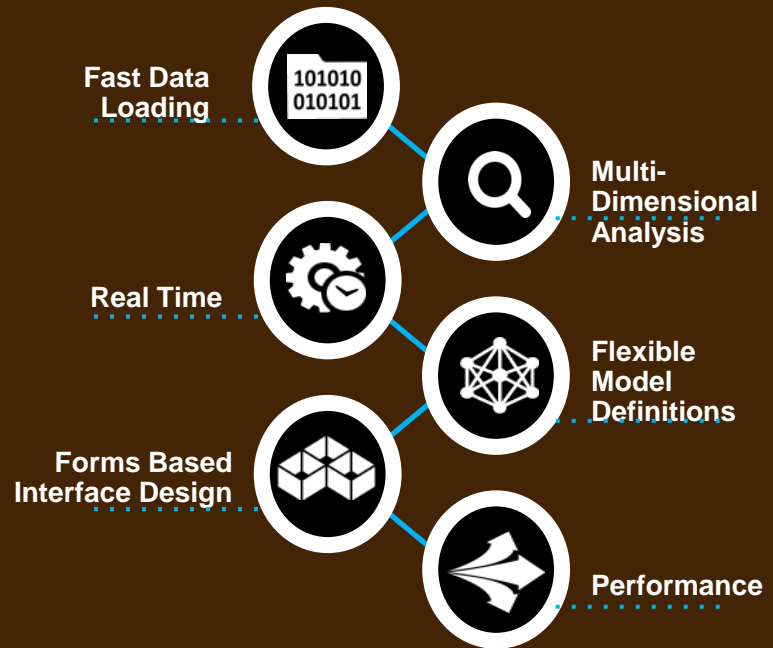

Fast, Agile, Scalable

Even faster and more powerful than before

IBM Planning Analytics is the best Performance Management solution on the market **for managing volatility**, providing **real-time** responses to complex questions.

Embracing Volatility

- High volume contribution
- What-if analysis
- Meta-data changes
- Data refresh

Speed and Agility with new Smart Cache and Anti-Lock

Additional flexibility with attribute analysis and hierarchies

Foresight: IBM Planning Analytics

- Excel Integration
- TM1 Engine

FORESIGHT

- Data Discovery
- Advanced Analysis
- Internal & External Data

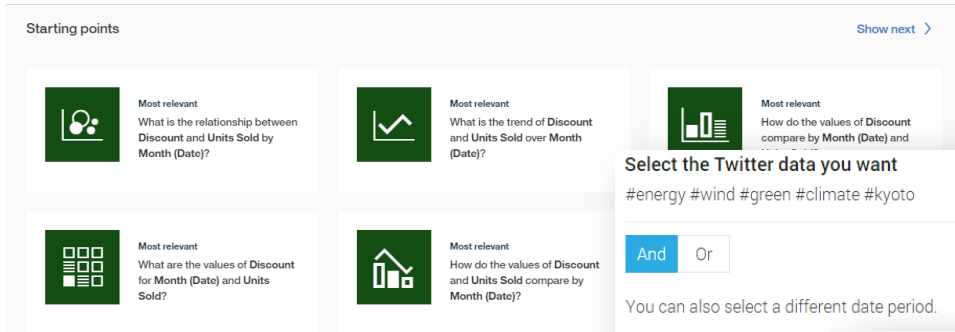

AGILITY

- Strategy Management
- Metrics and Drivers
- Management Reporting

Smart Data Discovery with Watson Analytics

Natural language and guided discovery

Easy access to external data

Select the Twitter data you want

#energy #wind #green #climate #kyoto

And Or

Create data set

You can also select a different date period.

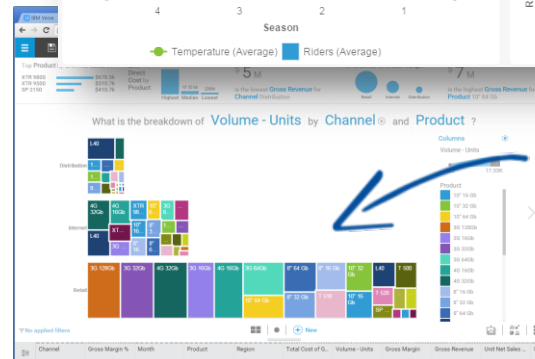

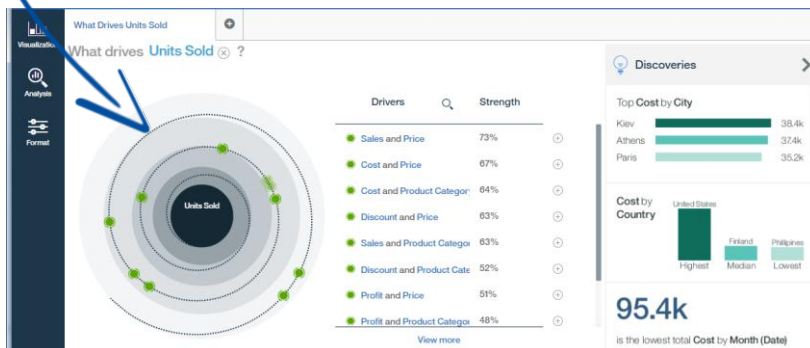

Start date and time
2015-03-20

Bicycle Sharing Overview for year end

**Collaborate and share
Tell a story**

**Identify and validate
performance drivers**

Compelling visuals

The screenshot displays the IBM Watson Analytics interface. At the top, it says "IBM Watson Analytics" and "New discovery set". Below the header, there's a search bar and several icons for visualization, analysis, format, and sharing. The main area shows a project titled "What Drives Units Sold" with a "Predictive Model" tab selected. A question "What is a predictive model for Units Sold?" is posed. The model's performance is shown as "Predictive strength: 75%".

A decision tree diagram is presented, illustrating the logic of the predictive model. The root node splits based on "Price" (>202). One branch leads to "Sales", which further splits by "Sales" (<242.042; >242.042). The other branch from the root leads to "Cost" (>149), which splits by "Cost" (<308.578; >308.578). These branches lead to various product categories like "Clothing: Fitness & Health: Pkts; Toys", "Electronics", and "Fitness & Outdoors". The final output is "Units Sold", with values ranging from 1.07 to 83.01.

Region - City	Year (Date) - D...	Product Cate...	Product Cate...	Product Name	Year (Date)	Month (D...

Internal and External Data

- Easily enable secure access to data and applications across environments, whether it be from on-premises to the cloud or from one cloud to another cloud
- Extract data, metadata and security profiles and move them into open data warehouses and repositories for use in performance management or business intelligence (BI) applications
- Data synchronization, connectivity and transformation that enable you to orchestrate integration processes across multiple applications

Agility: IBM Planning Analytics

The Challenges that Planning Analytics can Address

- **Spreadsheets are slow, error-prone and disconnected**
- **Inability to gain strong insights into drivers of revenue and profit**
- **Forecasts accuracy – reliance on ‘gut feel’ instead of algorithms**
- **Financial and operational plans are disconnected**
- **Planning system is unable to model rapidly changing business conditions**
