Technology

Process

Culture

# #3 Culture challenges remain the biggest impediment to transformation efforts

Culture

# Challenges

- **Customer experience** - too many new requirements and many technical dependencies for releases, slow reactive approach, unable to drive changes, complex and interdependent solutions
- Inefficient, fragmented processes, KPIs not connected to customer value
- Compliance testing slows the releases down
- Huge cost of IT, solutions not scalable, lots of technical debt
- Duplicated effort
- **Better quality** - mostly manual testing and manual application of changes
- **Developer onboarding** - likely to take months
- **Developer experience** - difficult to find information about specific software systems
- **More automation** - complex and lengthy manual deployment with scripts created on app by app basis
- Complexity
- Fragmented testing
- Development disconnected from deployment - siloes
- Security seen as a blocker
- Long term capacity planning - more agile approach needed
- Independent vendor, black box

# Ambitions

- **Customer experience** - faster releases of more valuable functionality, reduced time to market
- Deliver Business Value
- Reduce cost of IT
- Reduce Time to Market
- Baselined metrics connected to business outcomes that drive the goals
- **Refactor, slice off a vertical slice**
- **Better quality** - increased testing coverage and improved quality achieved by automated testing
- **Developer onboarding** - reduce time and automate the process
- **Developer experience** - services more efficient and easy to consume and possible for developers to have input
- **More automation** - entire platform needs to be automated
- Less dependency between projects and products
- Improve - shift left on security
- Effective collaboration between product and development
- Include security and network departments into reshaped delivery processes

# Culture- Fostering innovation

Leadership support is Crucial!

## **Avoid long-term roadmaps.**

Have a vision, but plan just enough to get started.

## **Break big things into small chunks.**

Work incrementally.

## **Use rapid feedback cycles.**

Try new and daring things, but fail fast.

## **Experiment to inform strategy.**

Turn small failures into learning opportunities.

## **Automate as much as possible.**

Use test-driven development and continuous integration and delivery.

## **Build new skills.**

Use pairing and mentoring to share across teams, departments, and organizations..

# Rapid innovation & real business results

With **Red Hat Open Innovation Labs**

## Experiment

Rapidly build prototypes,  
do DevOps & be agile

## Immerse your team

Work side by side with experts  
in a residency-style engagement

## Innovate

Bring modern application  
development back to your team

# #2 Challenges Encountered in the Digital Journey

Source: Harvard Business Review Analytic Services, commissioned by Red Hat. [Rethinking Digital Transformation: New Data Examines the Culture and Process Change Imperative in 2020](#). March 2020. (n=690)

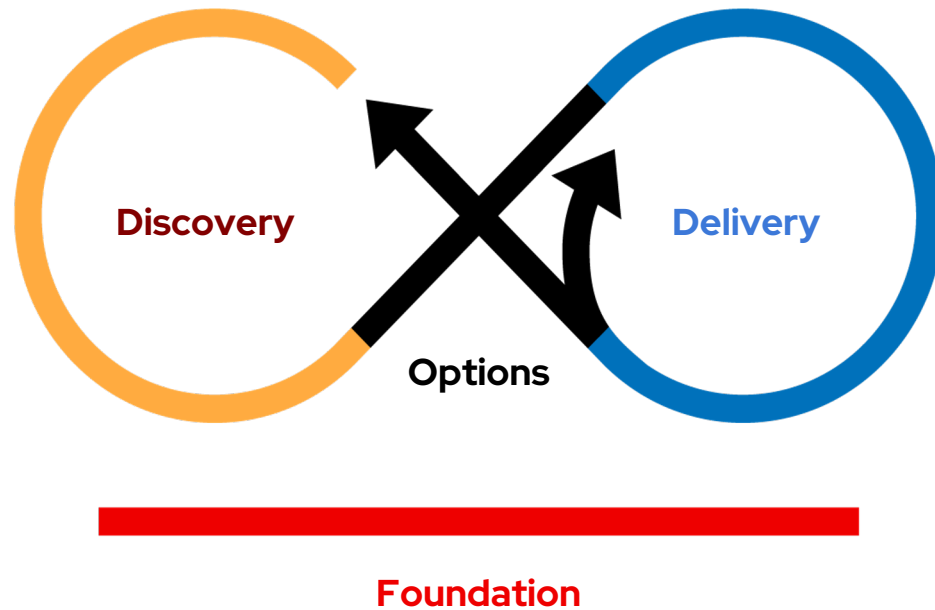

# Conway's law

“Organizations, who design systems, are **constrained** to produce designs which are copies of the communication structures of these organizations.”

# Open Practice Library

<https://openpracticelibrary.com/>

Deliver real business value with agility

The foundation creates a team culture of collaboration and technical engineering practices. Without this foundation, teams cannot reach sustainable continuous delivery.

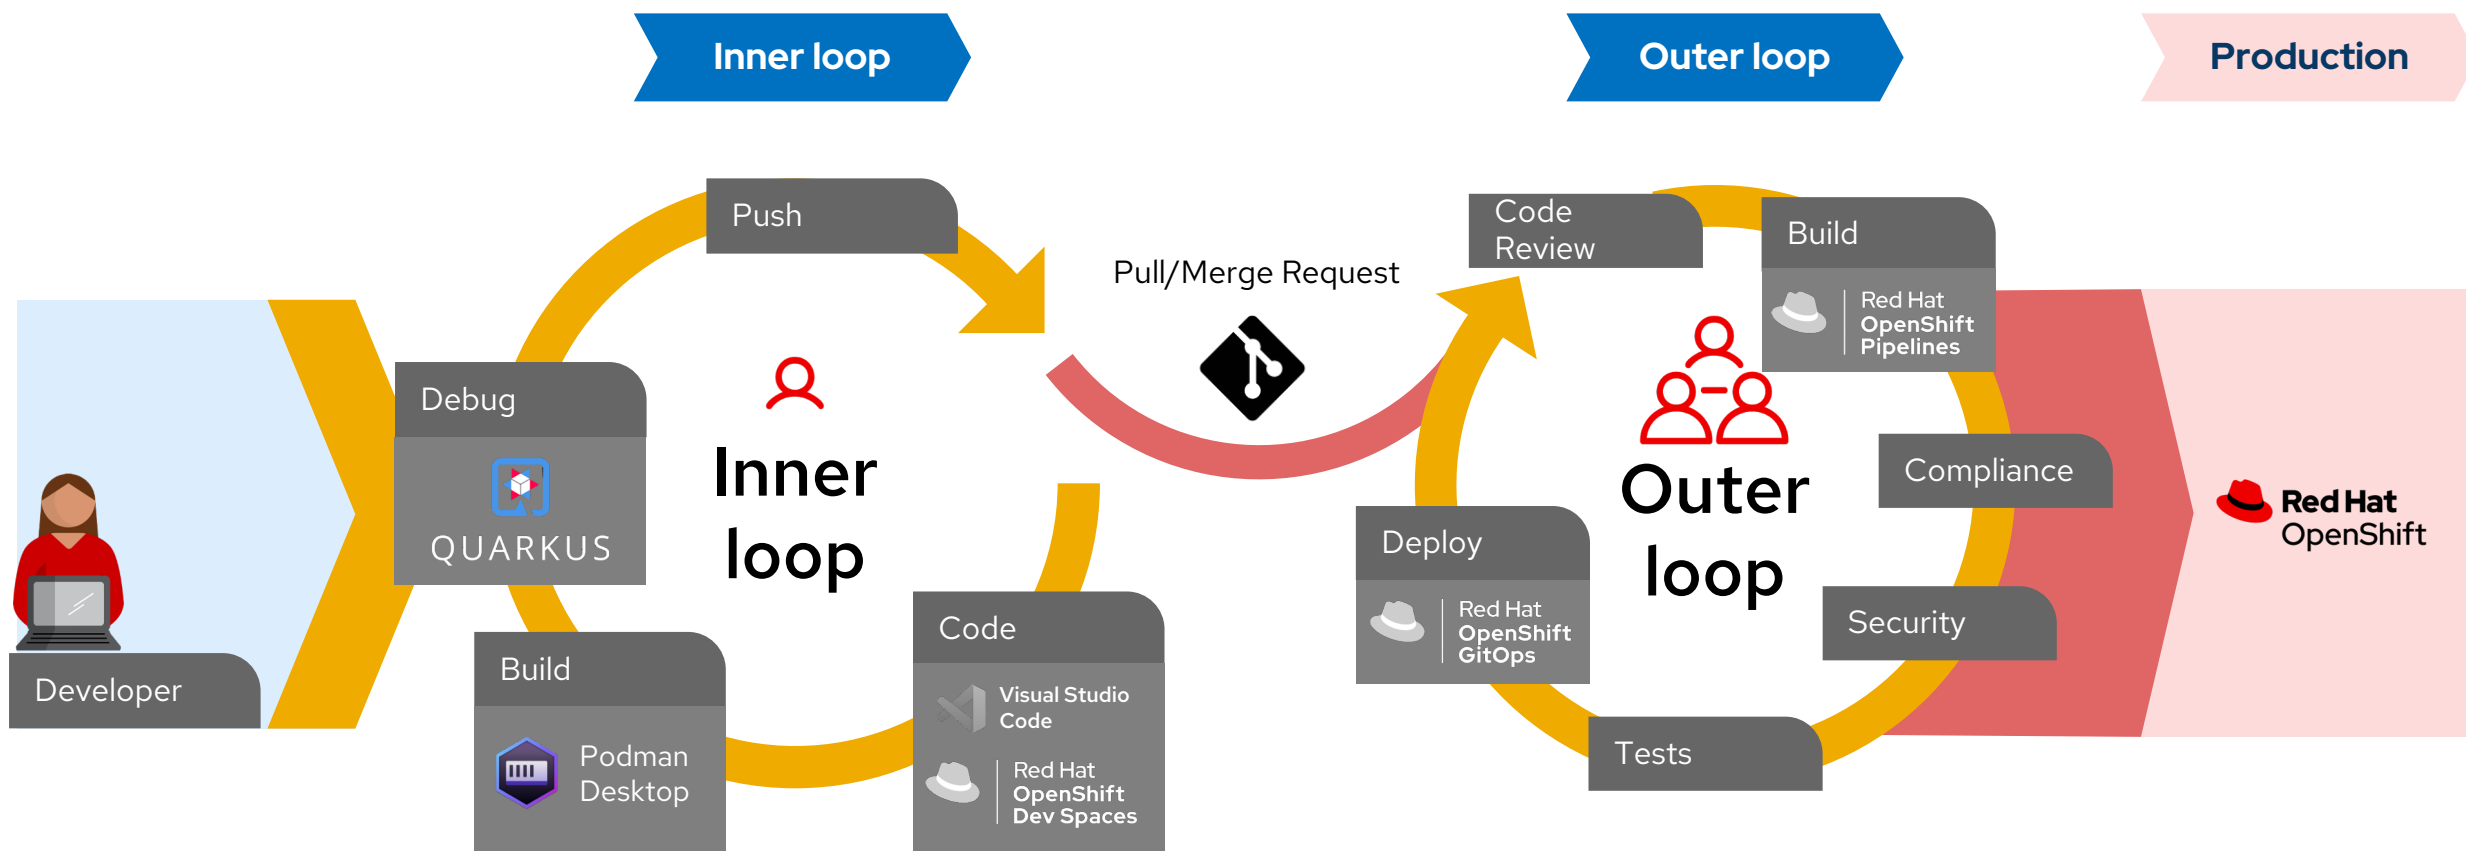

Why are you doing this?  
What problems will it solve?  
How will you measure the results?

Compare what you've learned with the direction you are heading.  
What are the possibilities?  
What do you need to realize the outcomes you want?

Deliver the features you have determined and get feedback from users and stakeholders.  
What was the impact?  
What did you learn?

# Developer Flow

How Developer Tools bring customers from code to production

WALL OF CONFUSION

# EXECUTIVE SUMMARY - THE VALUE OF DEVOPS

(An example from a previous Red Hat Open Innovation Labs Residency customer)

Total lead time from idea to first delivery to users	Prioritized bug	Functionality done confirmation	Critical bug fix
Current Way of Working 38 Weeks	Current Way of Working 23 Weeks	Current Way of Working 4 Weeks	Current Way of Working 10 Hours
New Way of Working 7 weeks	New Way of Working 3 weeks	New Way of Working 1,5 Hours	New Way of Working 30 min
Improvement 31 weeks reduction 5,4x faster	Improvement 20 weeks reduction 7,6x faster	Improvement 158 hours reduction 105x faster	Improvement 9,5 hours reduction 20x faster

# #1 Challenges Encountered in the Digital Journey

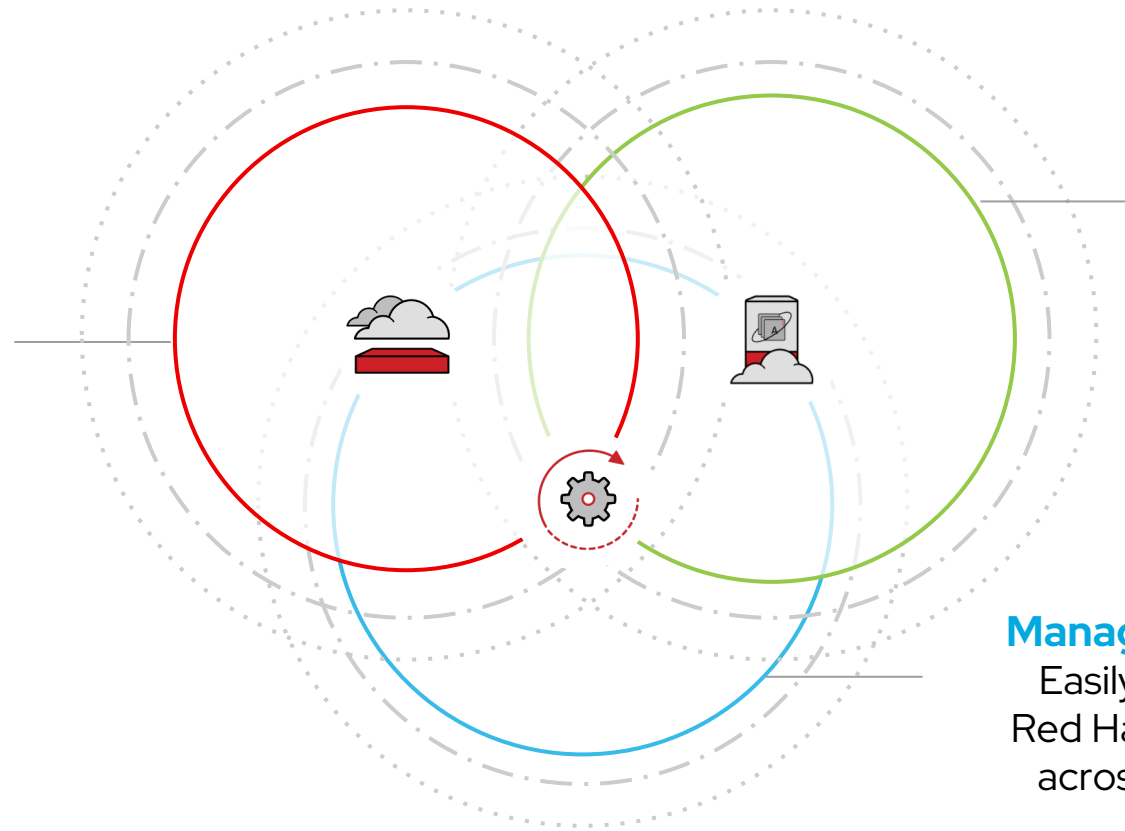

Technology

# Future architectures are open & agile, hybrid & multicloud

## Hybrid cloud infrastructure

Secure, scale, & manage foundations for traditional & cloud workloads across all environments

## Cloud-native development

Develop, deploy, & manage any application, on any environment & give developers what they need to innovate

## Management & automation

Easily & seamlessly manage Red Hat platforms & automate across hybrid environments

# Deploy faster across all footprints with a standard operating environment

Your cloud or hardware footprint

Deploy faster across all footprints with a standard operating environment

Increase stability & security

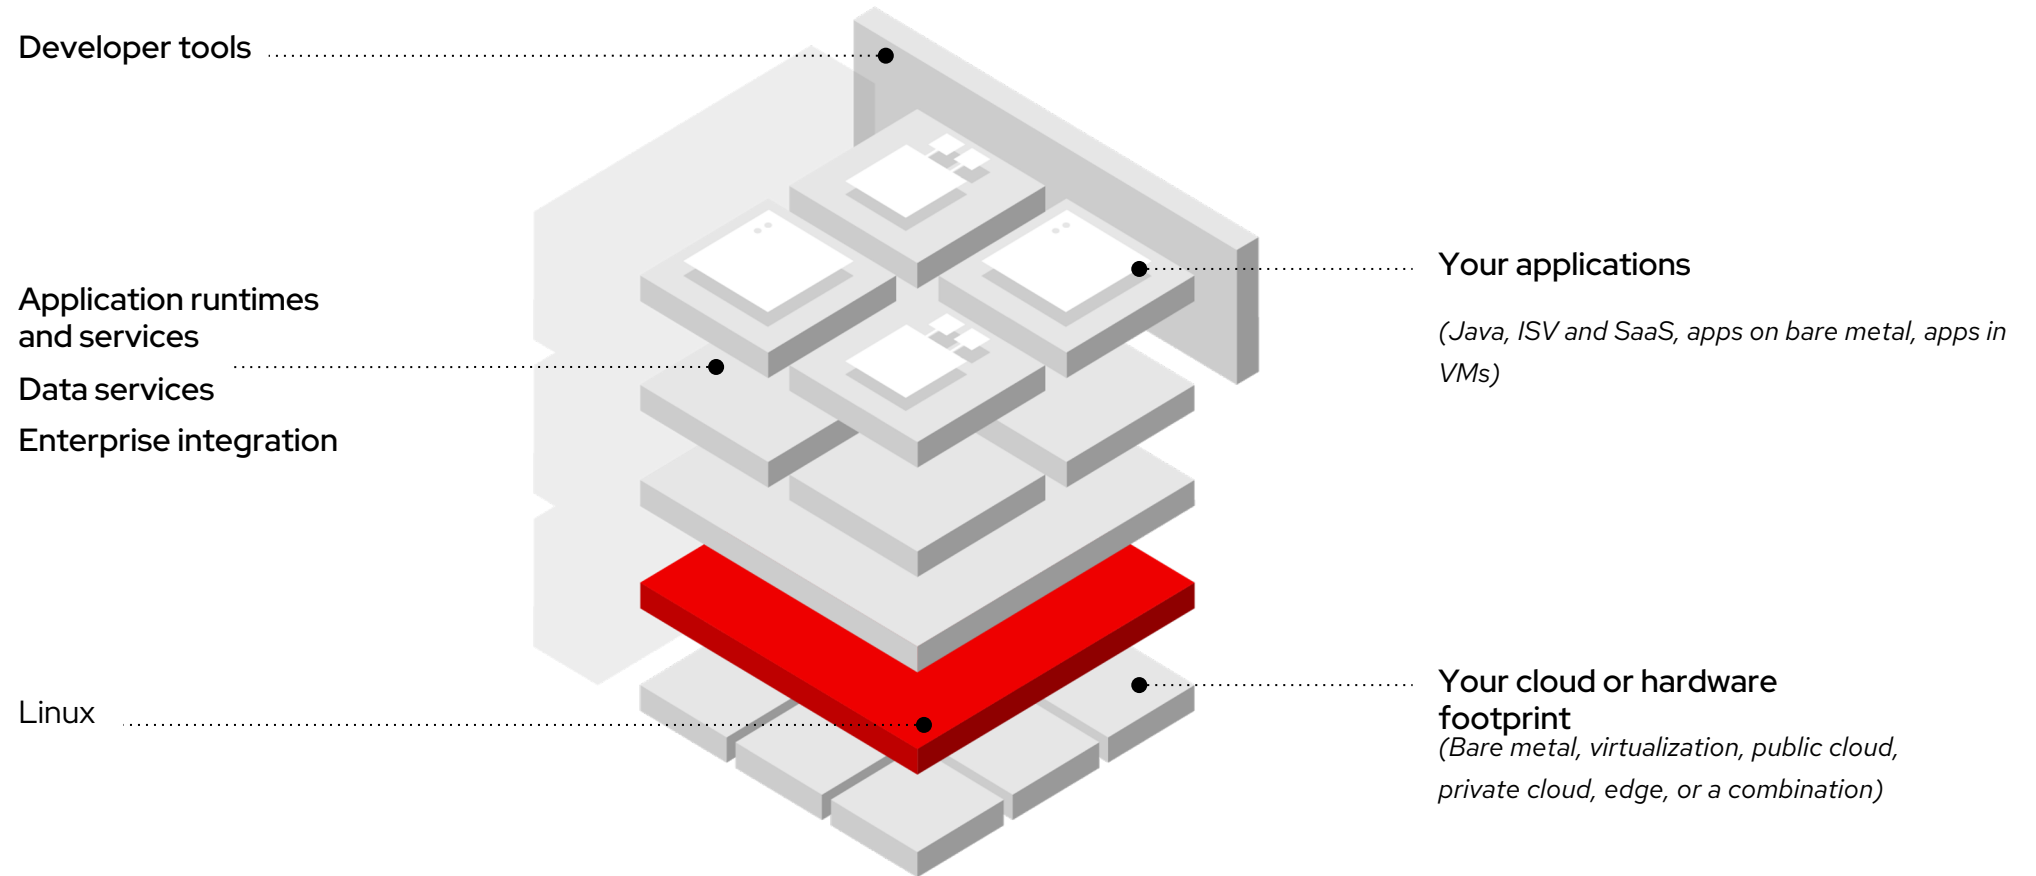

# Speed up IT delivery by automating manual processes

## Reduce errors and increase stability

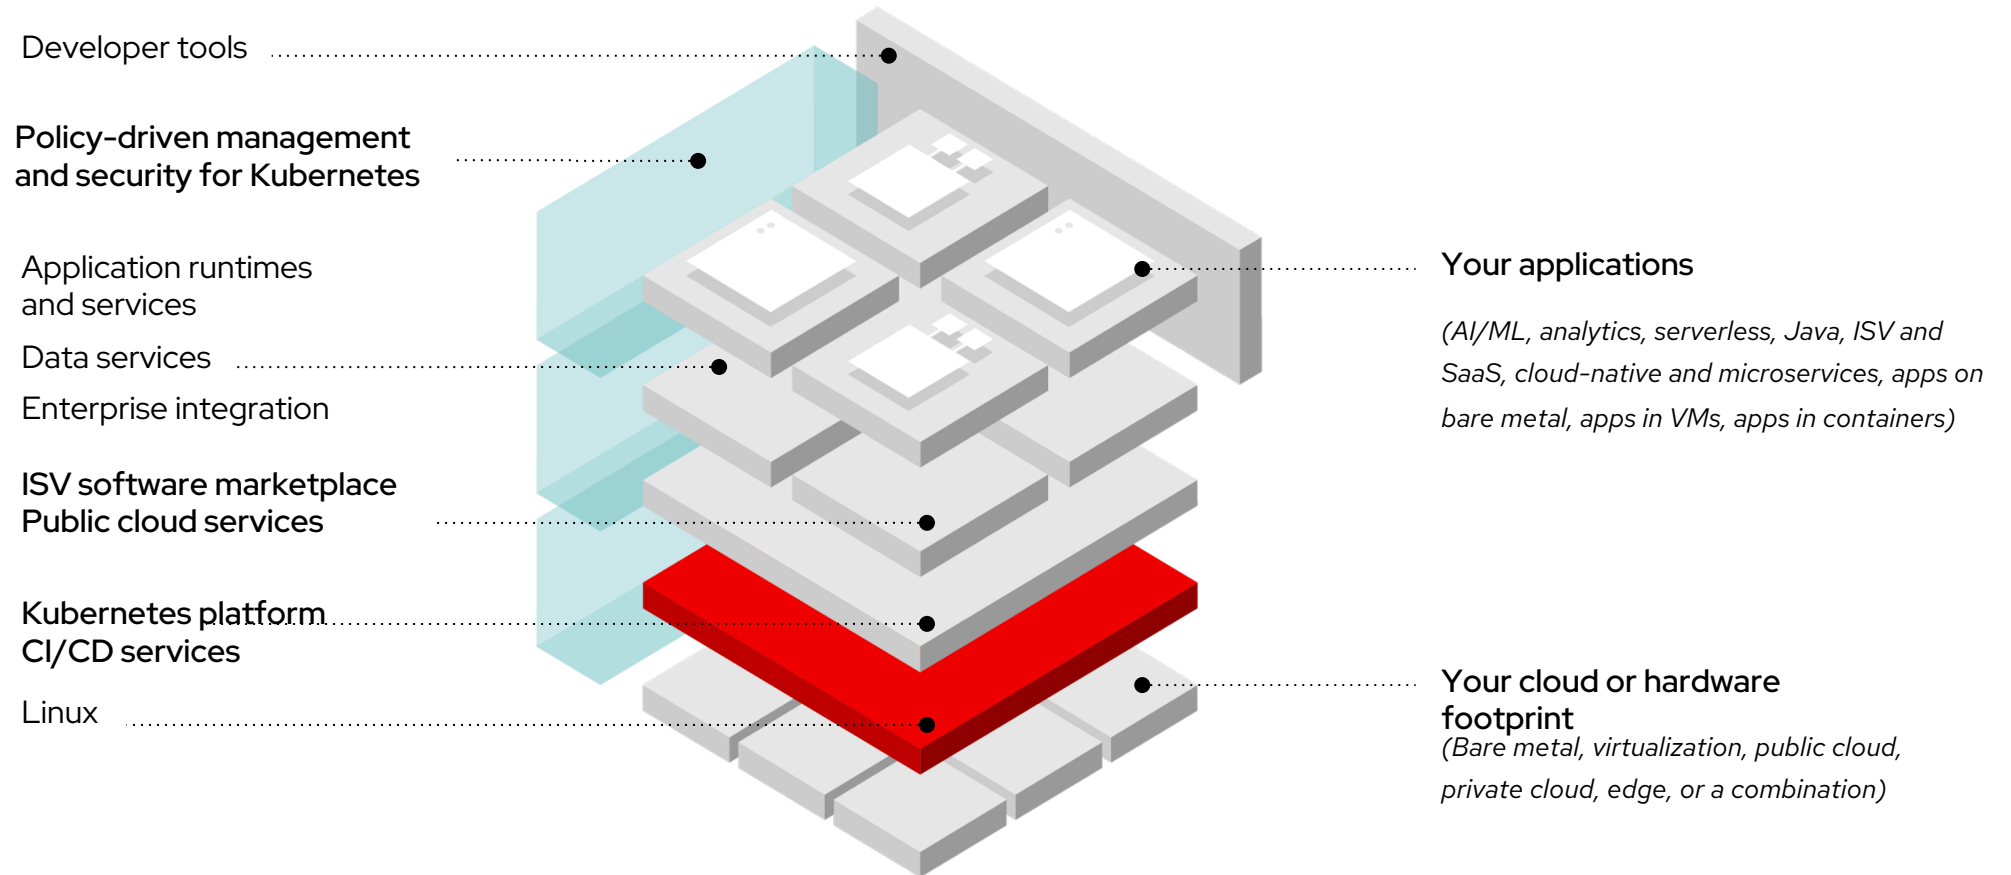

# Accelerate traditional application delivery

# Develop and deploy applications with policy-driven security and stability

## Accelerate cloud-native application delivery

# Open hybrid cloud with Red Hat

**How** you build **today**  
determines what is  
possible **tomorrow**.
